

We are in October 2017, and the heaviest flood since decades happened in this dry area. Seven years nearly no water was present, and at the moment major parts of our school area are flooded... On the photo our headmaster Raja Sekhar is standing in front of the guest house.

On the second photo you see the classroom of the 5th class, it is not accessible. The classes 4, 5 and 6 will be taught in the administration building temporarily...

More details about the water situation you find in the blog:
